REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the prior art of record do not fairly teach in permissible combination the claimed invention. Applicant's arguments filed 10/23/2006 are persuasive in view of art previously applied, including the Zankl reference. Furthermore, McCarty teaches away from the claimed invention because he teaches elimination of the regulating valve 44 when used in an expendable engine versus when used for emergency lubrication in a conventional engine (see col. 5, lines 55+). Hence, one of ordinary skill would not be motivated to employ a different type of regulating valve when use of valves would be preferably eliminated altogether in such systems. McCarty also expands upon the requirements of the lubrication system for an expendable gas turbine engine to include keeping costs as low as possible and the system being *extraordinarily* reliable (col. 2, lines 6+). Hence, the design requirements for such an engine would be rigorous due to their conflicting nature -- low cost and extraordinary reliability. While pulsed solenoid valves operated in fully open or fully closed positions (e.g. PWM valves) are known in the art for normal (non-expendable) gas turbine engines, they are mainly used in *fuel* systems, see e.g. McArthur 6,209,309, which also uses a bladder 32 and the PWM valve 20, which would have vastly different requirements than lubricating systems. The PWM valve in that *fuel* system also is in front of a compressor -- which would be incompatible with the instant application.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
